The Freshwater Beach Masterplan project is highly anticipated by the community as it is the first major renewal of the site to be undertaken since the 1980s.

The challenge is to deliver a project that can respond to demand whilst enhancing the site's coastal context and preserving its much loved local character.

The current high level Masterplan was adopted by Northern Beaches Council (NBC) in May 2018. The decision to take the detailed concept design back to the community is an important one.

This next step allows Council to engage with the community and present in more detail the proposed design solutions to address general amenity, accessibility, play and maintenance requirements.

Once Council has heard from the community, we can prioritise what is most valued and work towards a staged implementation of those improvements.
